EDIX® Treeless

Treeless riding reintroduces the way of riding that was performed for many centuries, before the invention of the treed saddle. Therefore, treeless riding is not a novelty, but a different way of horse riding. Due to the treeless saddle, horse and rider experience more mutual feeling, the so-called "close contact", enabling them to develop easily a more refined way of communicating through the rider's position.

A treeless saddle consists of at least two individual components, and the term "treeless saddle combination" would actually be more appropriate. It is the combination of the special saddle pad, including the pressure-distributing inlays, with the two-part superstructure (the saddle) which together ensure ultimate flexibility across the horse's back. Right there is the strength of the balanced pressure distribution, through the different layers across the maximum surface of the horse's back. It is exactly

those soft parts that give the saddle great flexibility in all directions. It goes without saying that your horse will be able to move much more freely because of this enormous flexibility.

The EDIX® treeless saddles and saddle pads consist of high quality materials which, owing to the structure of different layers of flexible materials, together ensure perfect pressure-distributing properties, the so-called EDIX® MPDS: multiple pressure distribution system. Due to this specific construction, the treeless saddles have the unique characteristics of being able to fully adapt to the anatomy of horse and rider.

EDIX® recommends purchasing a treeless saddle as a package, including stirrups with fenders stirrup leathers and a matching saddle with inlays. In order to ensure constant firm fixation, EDIX® recommends a fully elastic girth.

The EDIX® treeless saddles come in different models and sizes. The EDIX® range offers sizes from 12" up to 19", in diversity, dressage and Western style. The different models are available in the colour combinations brown, black and natural, in synthetic materials or genuine leather.

For first advice, free of any obligation, contact one of the official EDIX® saddles dealers. Visit the website EDIX® / dealers for the nearest dealer and contact details. The anatomy of both the horse and the rider play a significant role in choosing the proper size. An EDIX® saddle dealer will guide and advise you before as well as during the purchase process, the testing period and offer comprehensive aftercare for a prolonged period of time. For more information regarding treeless, please visit the website: www.edixsaddles.com/information. If you have any questions, please contact one of the EDIX® saddles dealers or send an email to EDIX® saddles: info@edixsaddles.com.

When you follow the recommended process of fitting, testing, purchasing and aftercare, EDIX® saddles guarantees a perfect fit of your saddle for you and your horse to enjoy for many years.

EDIX® Amazone

A beautifully fine finished anatomically shaped dressage style bareback pad made from a quality brushed cowhide leather.

Buying a complete Amazone bareback pad the combination

consists a superstructure of a and a high quality brushed cowhide leather bareback pad and a substructure of a contoured saddle pad with a finished underside of Australian Merino® sheepskin, including 3 Mesh inlays. The PP reinforced leather stirrup straps, lightweight pvc stirrups and English rigging complete the EDIX® Amazone. This is a bareback pad plus combination making it the ideal choice for riders who struggle to choose between a bareback or a treeless saddle. The EDIX® Amazone has the best features of both, it equals the comfort of a saddle and the flexibility and lightness of a bareback pad.

This anatomically shaped, dressage style bareback pad has a pressure distributing structure of high quality flexible materials (see drawing), which ensures even distribution for the riders weight. The hand-formed knee-rolls, pommel and the soft cantle at the back of the seat gives the rider a feeling of comfort and support.

The EDIX® Amazone comes standard with a matching strongly quilted cotton saddle pad, contoured the same way as the bareback pad and including 3 mesh inlays. The underside of the top of the saddle pad, where the rider's leg rubs against the pad (the abrasive part), is reinforced with a strong nylon to reduce wear. The underside of the saddle pad (saddle seat position) is finished with 30 mm thick Merino® sheepskin. The separate inlay pockets to the left and the right of the pad create freedom of movement for the spine.

The total construction of the EDIX® Amazon bareback pad and the matching Amazone pad guarantee an extremely high riding comfort for both rider and horse. The FRA® supergirth is optional and its 100% elasticity ensures a rock-solid fixation.

EDIX® saddles advises you to buy the proposed composite combinations completely. This to achieve optimal pressure distribution. You'll find more information in the extensive EDIX® information on the website.

Inlays are subject to wear and tear depending on the intensity of use and need to be checked from time to time for the residual force. These sets of inlays are separately available. The EDIX® Amazone bareback pad combination is available in the colors brown and black and in sizes medium and large.
