treeless saddle

### EDIX® Treeless

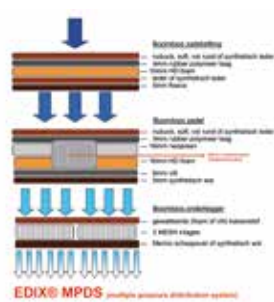

Treeless riding reintroduces the way of riding that was performed for many centuries, before the invention of the treed saddle. Therefore, treeless riding is not a novelty, but a different way of horse riding. Due to the treeless saddle, horse and rider experience more mutual feeling, the so-called "close contact", enabling them to develop easily a more refined way of communicating through the rider's position.

A treeless saddle consists of at least two individual components, and the term "treeless saddle combination" would actually be more appropriate. It is the combination of the special saddle pad, including the pressure-distributing inlays, with the two-part superstructure (the saddle) which together ensure ultimate flexibility across the horse's back. Right there is the strength of the balanced pressure distribution, through the different layers across the maximum surface of the horse's back. It is exactly those soft

**EDIX®**  
saddles

parts that give the saddle great flexibility in all directions. It goes without saying that your horse will be able to move much more freely because of this enormous flexibility.

The EDIX® treeless saddles and saddle pads consist of high quality materials which, owing to the structure of different layers of flexible materials, together ensure perfect pressure-distributing properties, the so-called EDIX® MPDS: multiple pressure distribution system. Due to this specific construction, the treeless saddles have the unique characteristics of being able to fully adapt to the anatomy of horse and rider.

EDIX® recommends purchasing a treeless saddle as a package, including stirrups with fenders stirrup leathers and a matching saddle with inlays. In order to ensure constant firm fixation, EDIX® recommends a fully elastic girth.

The EDIX® treeless saddles come in different models and sizes. The EDIX® range offers sizes from 12" up to 19", in diversity, dressage and Western style. The different models are available in the colour combinations brown, black and natural, in synthetic materials or genuine leather.

For first advice, free of any obligation, contact one of the official EDIX® saddles dealers. Visit the website EDIX® / dealers for the nearest dealer and contact details. The anatomy of both the horse and the rider play a significant role in choosing the proper size. An EDIX® saddle dealer will guide and advise you before as well as during the purchase process, the testing period and offer comprehensive aftercare for a prolonged period of time. For more information regarding treeless, please visit the website: [www.edixsaddles.com/information](http://www.edixsaddles.com/information). If you have any questions, please contact one of the EDIX® saddles dealers or send an email to EDIX® saddles: [info@edixsaddles.com](mailto:info@edixsaddles.com).

When you follow the recommended process of fitting, testing, purchasing and aftercare, EDIX® saddles guarantees a perfect fit of your saddle for you and your horse to enjoy for many years.

### EDIX® Tiamo

A super comfortable saddle with a nod to the Wild West, made from very supple, high-quality soft cowhide leather with a highly respected method for girth connection.

The girth connection of the EDIX® Tiamo Western saddle is derived from the technique developed by George B. McClellan in 1855. The triangular connection allows the girth force to interact across a larger area of the saddle, as the connections are fastened at the front and the back of the saddle, as opposed to in the middle. Furthermore, the position of the girth itself can be adjusted forward or backward. As such, only the weight resulting from the interaction of the rider will be at the centre point. The super comfy Tiamo western saddle consists of a 2-part superstructure of soft cow leather and a substructure of a contoured saddle pad, including 3 Mesh inlays. The PP reinforced leather small style fenders and leather covered stirrups complete the EDIX® Tiamo. This treeless western saddle meets all the requirements a leisure rider could wish for as we wish for comfortable horse riding.

An EDIX® treeless saddle offers your horse optimum pressure distribution using the special layers of flexible materials: EDIX® MPDS, (multiple pressure distribution system). These soft, flexible layers adapt to the anatomy of the horse, as well as the rider's

posture. An EDIX® treeless saddle optimally reacts to the movements of the horse. Partly due to this, the rider learns to adapt to the horse's movements and, as such, develops an independent position. As a result, the movements of the horse and rider become one, and from there, excellent communication is created. Because the horse is moving much more freely, it has the possibility to develop optimally, which is often shown by an increase in muscle mass. Due to the above and after the habituation period, both horse and rider, show in all aspect of horse riding more relaxation and more fluid movement.

The pommel is interchangeable and therefore adaptable for a high or low withers. The pommel is made of fiberglass and the cantle is made of the soft material high density foam. They each link the left and right part of the saddle and together they offer stability to the saddle and seating comfort for the rider. Due to the saddle's construction freedom of movement for the spine is created.

The complete EDIX® Tiamo treeless western saddle comes standard with a contoured saddle pad, including inlays. Additionally, there is the option to choose a felt or a foam quilted saddle pad with an underside that is finished with a synthetic wool or a Australian Merino® sheepskin. Each of these pads are especially designed to fit the EDIX® treeless saddles, although they will also fit other treeless brands. Through their construction they are an addition on the pressure distributing materials of treeless saddles. The pads are anatomically shaped and equipped with the correct inlays ensure freedom of movement for the spine. If required, additional pressure and position distributing material can be added. Your saddle dealer will be happy to advise you. The Tiamo can be combined with the EDIX® saddlebags and breastplate, for which various rings have been fitted. The FRA® supergirth is optional and its 100% elasticity ensures a rock-solid fixation.

EDIX® saddles advises you to buy the proposed treeless saddles complete with substructure (special treeless pad). This to achieve optimal pressure distribution. You will find more information in the extensive EDIX® documentation.

Inlays are subject to wear and tear depending on the intensity of use and need to be checked from time to time for the residual force. These sets of inlays are separately available.

The EDIX® Tiamo Western saddle is available in the colours brown and black and in sizes small, medium and large.
